

Belvac Production Machinery Technical Bulletin

Information for Customers Operating and Maintaining Belvac Machines

ISSUE 7, VOLUME 11, JULY 2008

Fixed Base Neckers: Gear Train Item Numbers

Belvac's Fixed Base machinery incorporates a gear train comprised of three gear types:

- Item 2001 Transfer Gear (2.00" wide)
- Item 2002 Main Turret Gear (2.50" wide)
- Item 2201 Center Drive (Reducer) Gear (2.00" wide)

When replacing gears, be mindful of the Item numbers listed above. Prior revisions of select drive assembly prints (e.g. 2701778) were found to have an error in Item number; however, the respective bills of material in the machine manuals were found to be accurate. Order replacement gearing based on the above Item numbers in your machine manual.

*Contact Belvac Sales or Service Representatives for additional information.
