Vacuum Face Seal Manifold Upgrade CC93 TRIMMERS

The Trimmer Vacuum Face Seal Manifold Upgrade directly replaces previous Face Seal Manifold designs in the CC93 Trimming machines. This new design incorporates additional material, contributing to improved durability during extended storage. The center of the manifold has been refined for optimal functionality, removing the groove near the vacuum adjustment area. The extra material in the upgraded design enhances structural integrity, ensuring a robust and reliable design. Additionally, a locknut and screw are included to secure the vacuum adjustment piece, resulting in an improved user experience.

Starting Q4 of 2025, Belvac will only supply the latest Vacuum Face Seal Manifold Design. The original Vacuum Manifold (**7721965**) and Vacuum Adjustment Piece (**7721966**) have been discontinued. Customers ordering either part will receive the latest Vacuum Manifold and Vacuum Adjustment Piece Combo Kit (**7723703**). This Combo Kit replaces both the Vacuum Manifold and Vacuum Adjustment Piece during retrofits.

7721965 & 772966
Old Manifold/Adjustment Piece Combo

7723703
New Manifold/Adjustment Piece Combo
